

ABSTRACT OF THE DISCLOSURE

Unique feature of the JMAC system:

The container that the oil is purchased in is the container the JMAC system pumps from to provide oil to an engine. Specially designed universal caps that are part of the JMAC system do this. This makes the system convenient for customer, because there is no mess and the oil container is easy to replace.

Some of the benefits of the JMAC system:

- 1.) The JMAC system can provide engine protection while transportation is in motion. There is no need to stop on the roadside or in route if oil is needed.
- 2.) Clean, convenient and safe. Reduces the risk of getting burned by coming into contact with a hot engine.
- 3.) Environmentally friendly, oil will remain in a self-contained state. Which means less oil spillage.
